

New Product Announcement

Non-Volatile Memory Option for the DSTS-4A

Store and Recall

- Depth
- Calibration units (ft, fa, meters)
- Reply frequency
- Bottom echo width
- Fish depth
- Fish echo width
- Fish echo on time
- Fish echo off time

What it does

With the Non-Volatile Memory (NVM) option installed in the DSTS-4A, up to sixteen frequently used settings can now be easily stored and recalled automatically when the DSTS-4A is powered up. Speed up your work by storing frequently used settings with the NVM option.

Installation is simple

Remove the cover from the DSTS-4A and plug the NVM module into the RAM socket. Change the EPROM, replace the cover and the job is finished.

Operation is easy

Extensions to the DSTS-4A's familiar menu structure make using the new memory features a breeze. The Auto-Increment mode will automatically sequence through your choice of setups, or any setup can be recalled by number.

How to order the NVM option.

Order number **NVM-4A/X**, where **X** represents the first number of the software version. If your software is version 3.74, then you would order the NVM-4A/3 option. The software version is displayed when the DSTS-4A is turned on. Contact Ray Kauffman (rayk@infi.net) for more information, or check our website at **www.dsts.com**.
